DWARFPAPER

THE ONLY CRYPTOCURRENCY WITH DWARF-POWER

"GET THAT GOLD, FELLOW DWARVES..."

Dwarfcoin ist a purely community driven cryptocurrency that takes its inspiration from the dwarves of fantastical literature. It was started in November 2021 to provide the crypto space with a unique, new and secure token with a clear use case. It's main focus lies on usability and security. It was designed as rug-proof and community owned. And just like the dwarves from fantasy land, Dwarfcoin has a special relationship to gold - it rewards its holders in Elrond (\$EGLD) reflections!

OUR FINANCIAL ECOSYSTEM

10 %
Tax on every transaction

Dwarves love their gold, so they go out every day and mine for that precious yellow medal.

6 %
go to \$EGLD rewards

From every transaction with \$DWARF, we take a 10% tax.

3 %
go to our Liquidity Pool

Of these 10%, 6% go to our \$EGLD rewards, which are redistributed to \$DWARF holders according to wallet size.

1 %
goes to marketing

Dwarfcoin has a total supply of 1.000.000.000 tokens.

SECURITY AND GAINZ FOR THE DWARF-COMMUNITY

We know that the crypto community, especially newly minted BSC-projects, is full of frauds, scammers and bad actors. That is why we made our token scam-proof!

We installed an anti-whale feature where we limited max wallet size to 2.5 % of the total supply. The max transaction size is set to 1 %, so can't be one big transaction that kills the project in an instant.

Our devs renounced ownership of the contract, and we burned our initial liquidity at launch, so there is no exit-scam or rugpull possible.

The marketing wallet is controlled with a mulit-signature application that needs the confirmation of 3 out of 5 randomly selected coomunity-members. That way the marketing wallet can not be drained by developers.

THE FUTURE OF DWARFCOIN

To take \$DWARF beyond the realm of your typical meme-coin, we are planning great things for the future.

NFTs

Every dwarf is unique, so we are planning on launching our very own Dwarf-NFTs.

Date: Q 1 2022

DWARFSWAP

Since you earn \$EGLD as a dwarf-holder, the logical next step is our own decentralized exchange.

DATE: Q 1 2022

GAMING

We are already in contacts to fantasy-game developers to bring \$DWARF to the crypto-gaming world.

DATE: Q 2 2022

LET YOUR DWARVES WORK FOR YOU!

Dwarfcoin is a multi-use token on the BEP-20 platform. The very first use-case for Dwarfcoin is its reward-feature: we take 6% of every transaction (buy and sell) and redistribute it as \$EGLD to Dwarfcoin-holders according to their wallet.size. This is a great incentive for our holders and makes dwarf a perfect coin to earn rewards.

In the future, when the Dwarfswap exchange will launch and Dwarfcoin will be implemented in fantasy crypto games, \$DWARF will be the currency within this environment.

In the near future, you will be able to pay transaction fees on Dwarfswap with Dwarfcoin, buy NFTs with it and use it for in-game purchases in our planned fantasy crypto game.

So beginning in Q1 of 2022, Dwarfcoin will not only be a reward-generating token but also a multi-use cryptocurrency.

WHERE TO FIND DWARF...
